

YOTI MAKES DIGITAL IDENTITY VERIFICATION SOLUTIONS FREE TO ALL PUBLIC HEALTH ORGANISATIONS AND EMERGENCY SERVICES DURING COVID-19 OUTBREAK

This enables care providers to verify patient, staff and supplier identities both online and in person within seconds, while protecting personal data and privacy.

Yoti's contactless IDs remove the need for staff to handle patient documents while ensuring that organisations know who they're dealing with.

LONDON - 20/03/20 - [Yoti](#) is making its digital identity solutions free for three months to any public health organisation, emergency service and community initiative that are working to tackle the Covid-19 crisis. Yoti is also free for individual staff and patients. There are no integration fees, fixed terms, hidden charges or exit fees to reduce the financial burdens associated with rapid procurement.

The move is intended to help reduce pressure on health services handling increased volumes of patients who require online and in-practice support, plus onboarding new staff and suppliers. Yoti protects individuals and organisations from the threat of fraud attacks with verified details and a secure, privacy-preserving platform that helps people share their details in seconds.

Yoti verifies government-approved ID documents from over 185 countries, making it a global solution to onboarding staff, patients and suppliers. The highest security standards are used to verify people with a combination of world-leading technology and expert security personnel.

Yoti is architected in a way that means all data is securely encrypted and customer information cannot be sold to third parties for marketing or any other purposes. Yoti puts the individuals in control to consent to all data they share.

Robin Tombs, Yoti CEO said: "We want to do whatever we can to help individuals and organisations affected by COVID-19. Our technology and team are available to support."

[The National Care Force](#) is a free online platform powered by [Florence](#) that has been launched in response to staff shortages expected to occur due to COVID-19. It allows volunteers and professionals to book shifts across the social care sector and is integrating Yoti to speed up and secure the verification process.

"We are facing unprecedented challenges across our entire Health and Social Care system. I want to make sure we each do all we can to help to protect and help the most vulnerable in our society. The speed with which the Yoti team came back to us to support in our ID verification requirements was amazing," said Florence CEO Charles Armitage.

Yoti has an already-verified network of over 6 million downloads and over 70,000 people creating a Yoti Digital ID each month in the UK. Accounts are verified with an individual's biometrics and matched to government-issued IDs. The app works for people aged 13 and older.

About Yoti

Yoti is changing the way we prove identities. Founded in 2014, our free consumer app puts an individual's ID on their phone and makes it faster, simpler and safer to prove their identity online and in person. Yoti is built with privacy at its core and promotes data minimisation to help people share less data. Yoti offers a range of identity verification solutions for businesses and is also an industry leader in age estimation and biometric technology. All personal information is secured with 256-bit encryption and our security systems have been certified to meet SOC2 standards. For more information visit www.yoti.com
