

Yoti can help. Now.

We can work with you to rapidly deploy our digital identity and digital ID card solution across the world. Assisting with the immediate staff pressures from Covid-19 while preserving privacy and security.

COVID-19

Global identity platform and verified citizen ecosystem. Privacy preserving approach with no 'vendor lock-in'. Enabling you to focus on response and not worry about ID.

Issue digital identity cards remotely through the **free** Yoti app, with trusted credentials controlled by the issuing authority. This includes (but not limited to):

- **Staff Digital ID Card** - ideal for existing staff needing to prove who they are face to face.
- **Volunteer Digital ID Card** - perfect for external volunteers to verify themselves for safeguarding.
- **Verified Staff details** - helps issue verified attributes/credentials to the Yoti digital 'wallet'.
- **Covid-19 Tests** - immediately upgrade any digital ID card to demonstrate verified antigen test outcome.
- **Secure, multi-factor authentication** - a unique biometric template provides secure access to online accounts.

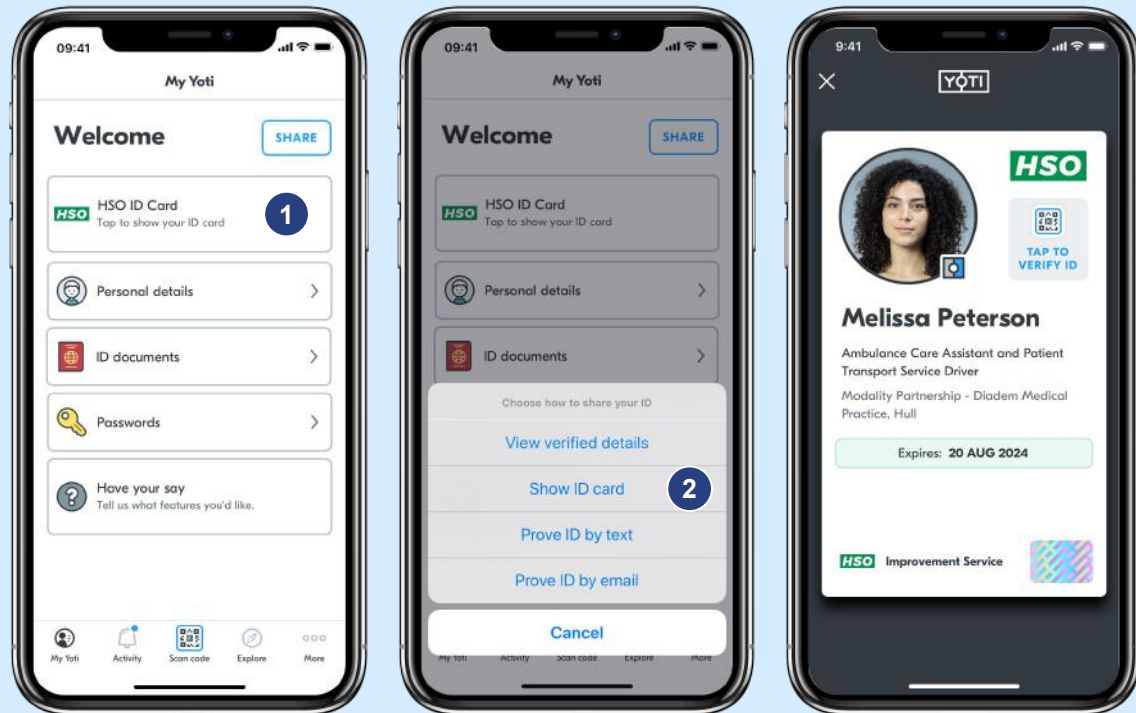

We've got this.

- Globally scalable and proven technology: We accept thousands of ID documents, including passports, driving licences and national IDs, from over 200 countries.
- Combination of advanced AI and human oversight to provide the highest level of assurance for verification.
- Working for government clients, airports and high security environments.

Provide existing staff with a secure, digital ID Card

Show Staff Digital ID Card

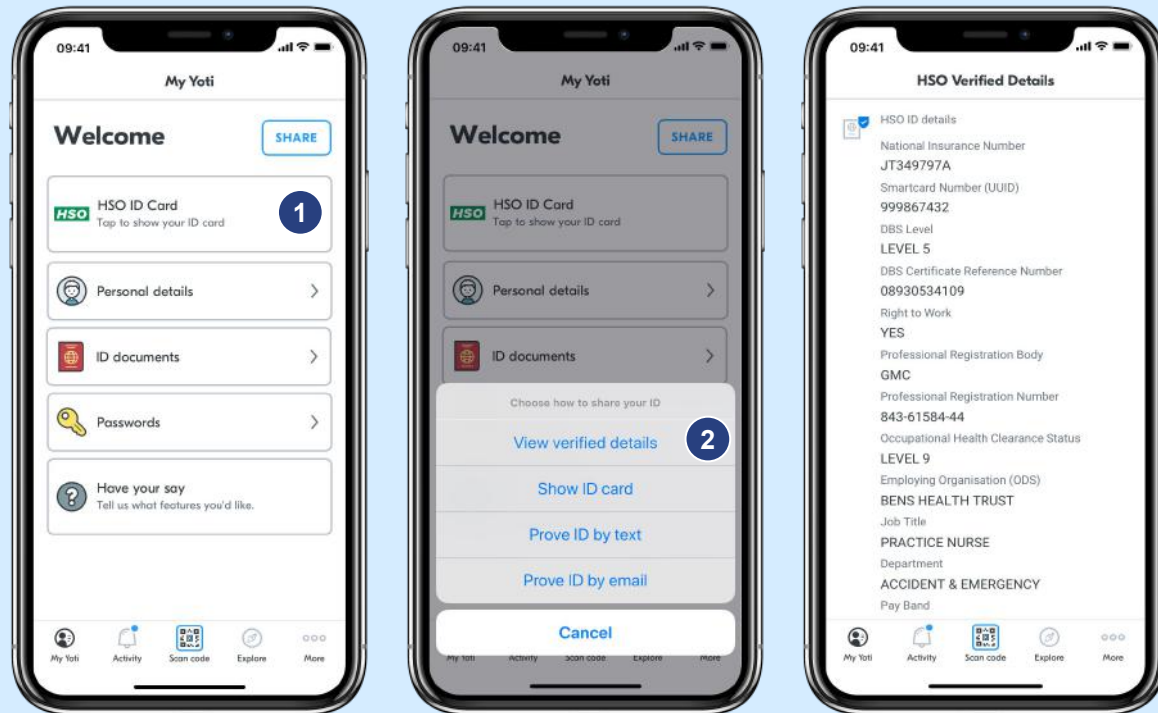

- The Staff ID Card owner can present their digital ID card on screen (or prove their ID by text or email).
- Full name, Job title, Location, Expiry, organisation logo, employee reference number,, verified email address, anti-spoofing measures.
- Secure login with 5 digit PIN or biometric (native phone fingerprint or Face ID).
- Revocable digital ID card, re-verified everytime it is presented.

Issue verified staff details and securely share with others

View verified Staff Details

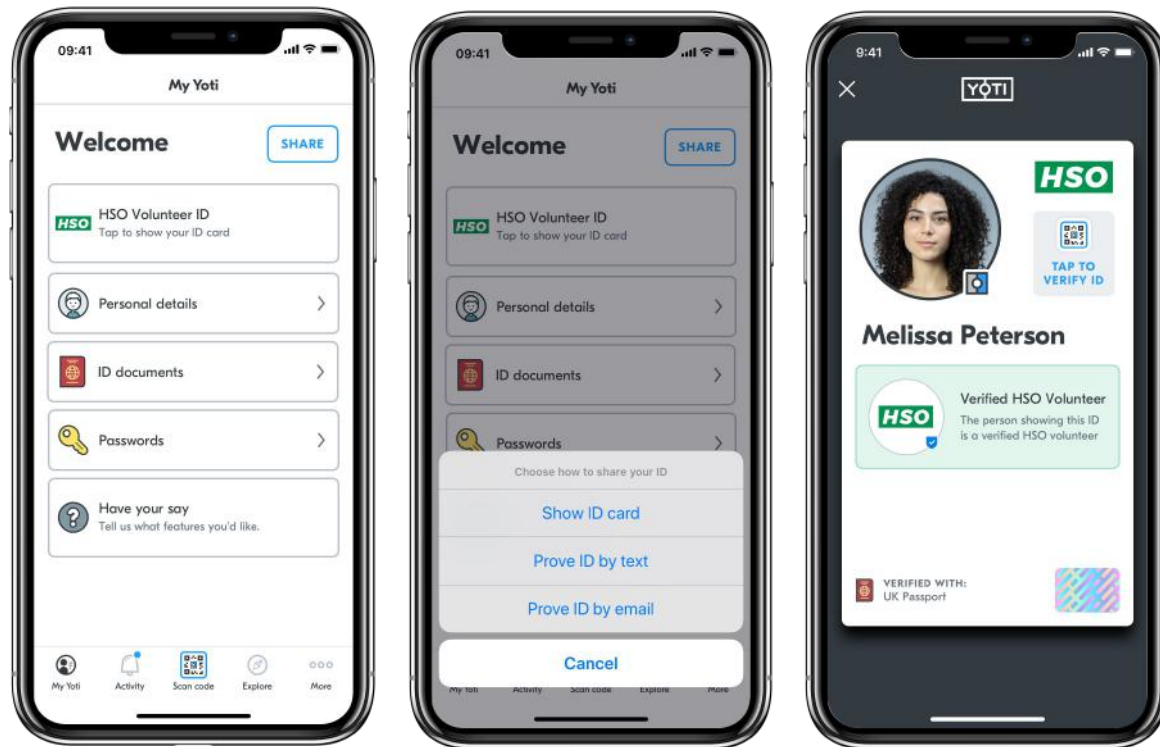

- As the Issuing Authority, your organisation can automatically issue, update and revoke trusted attributes.
- Staff can view, but not edit or delete the details.
- Staff can then securely share these verified details with other hospitals, key workers or any other person.

Rapidly mobilise Volunteers with verified digital ID card

Show Volunteer Digital ID Card

- The Volunteer can present their digital ID card on screen (or prove their ID by text or email)
- Security and anti-spoofing
 - The digital 'hologram' changes randomly daily. Any user with the same ID can see what the live hologram is for that day.
 - Any Yoti user can scan the ID Card QR code to verify the screen presented is not a fake digital ID Card.

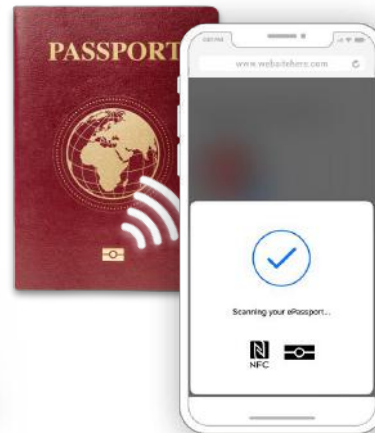

Instant and GPG45 compliant passport biochip verification

Secure, fast and verified

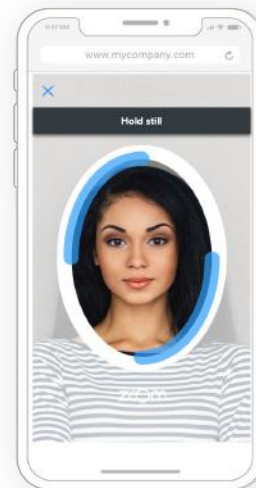

- The fastest and most secure way to onboard and verify volunteers is using their e-passport as a source of identity.
- Our technology reads the secure chip in the passport and can cryptographically verify it to the highest level as defined in the ICAO 9303 standard, in the same way as airport immigration gate and the EU Settlement Scheme.
- Deployable now on iOS and Android.

1 Capture document

2 NFC chip read of passport

3 Detect liveness and match face

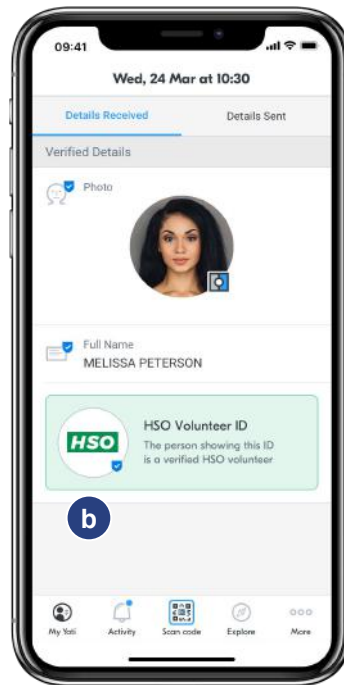

Ensuring there is a clear audit trail of ID sharing receipts

Full digital audit trail for everyone

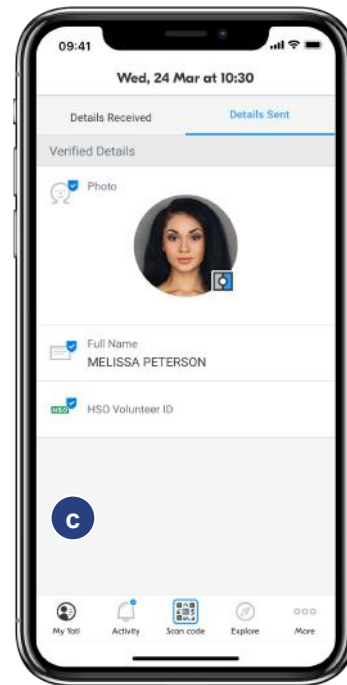

- Yoti provides digital audit trails for senders and recipients of identity related transactions.
- In this example, a Volunteer ID is sharing verified details:
 - a. Face to face
 - b. Remotely
 - c. Each party gets an immutable receipt.

Received after a face-to-face
QR code scan

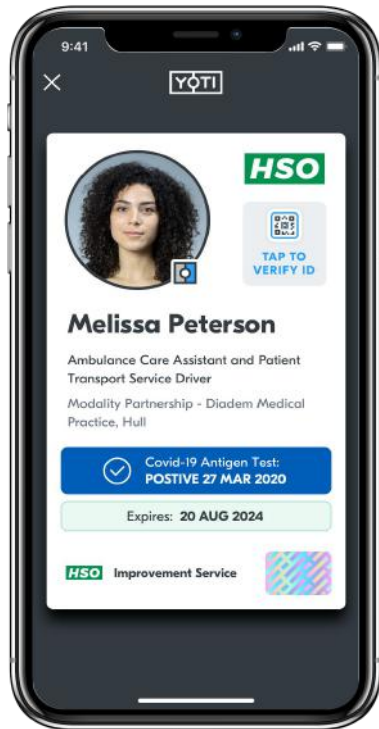

Received via remote share
email/text ahead of visit

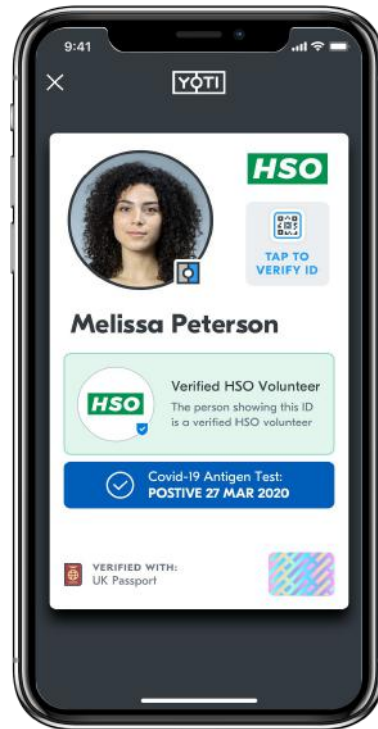

Sender receipt

Enabling key workers, health staff, volunteers or the public to demonstrate COVID19 test outcomes

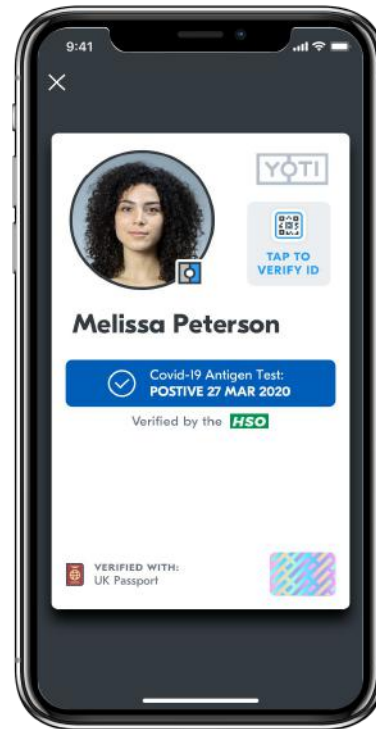

- Any person who tests for Covid-19 (antigen or antibody test) can be issued a test result status as a trusted attribute to their Yoti with a test date and expiry date controlled by you (as the Issuing Authority).
- The individual may be a member of staff, contractor, volunteer or a member of the public with GPG45 compliant verified ID.

Staff Digital ID card

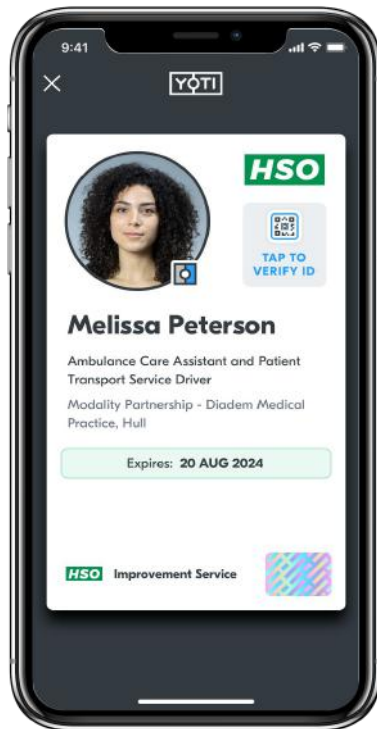

Volunteer Digital ID card

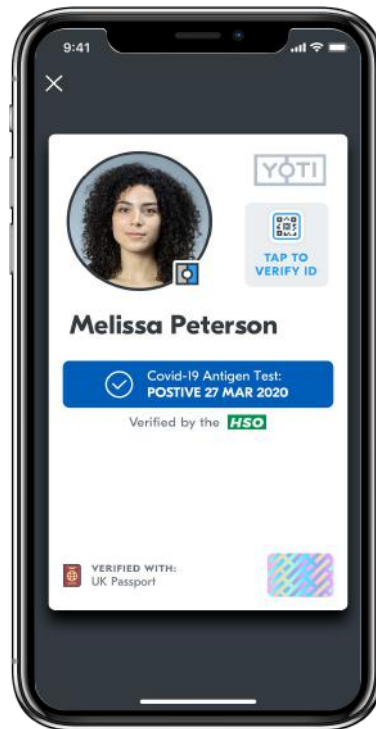

Passport verified Yoti user
'Covid-19 Card'

Proven secure digital ID technology including digital hologram and validity challenge

- Yoti securely links the unique individual to their digital ID and test result (when available) and displays this as part of the digital ID card.
- Digital hologram moves with phone and pattern refreshes at random.
- Tried and tested anti-spoofing measures to ensure that a digital ID can be challenged by anyone to verify an ID.

Staff Digital ID card including Covid-19

Passport verified Yoti user 'Covid-19 Card'

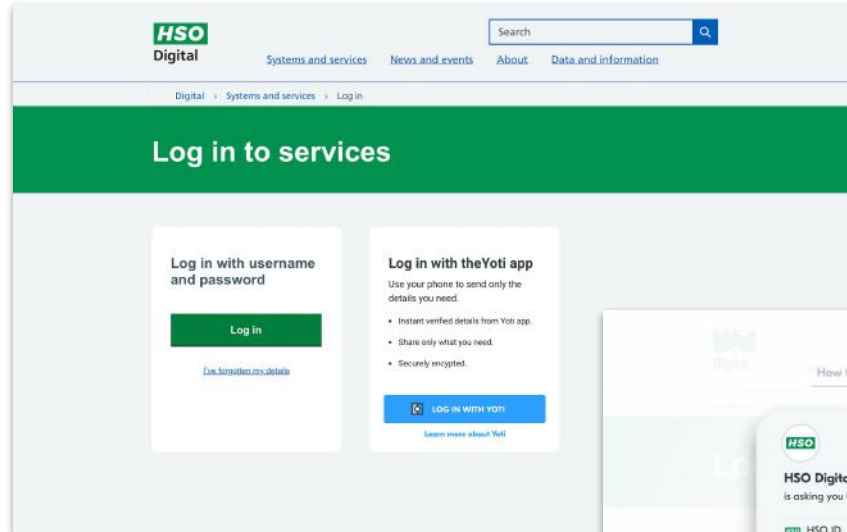

Anti-spoofing QR code challenge validity of the digital ID.

Secure, multi-factor authentication to websites and apps

Yoti provides a secure, multi-factor authentication solution, linked to a unique biometric template, to access online accounts.

Go beyond traditional username and password systems, which are a hacker's dream, and let your users access online services, securely, at the touch of a button

A radical new approach to storing sensitive data

Our systems are architected using PKI technology, which means a user's data can only be accessed by the user.

Separately encrypted details

Any details a user adds to their Digital ID are split up, individually encrypted and safely stored in Yoti's database.

Only accessible by the user

Only the user has the key to unlock their encrypted details. This key is also encrypted and stored safely on their phone, not on the Yoti database

Internationally recognised standards and accreditations

ISO 27001

Certified for security management standards

SOC 2 Type 2

Certified for technical and organisational security process

Safe Face Pledge
